INFORMATION DISCLOSURE STATEMENT

Sir:

This Information Disclosure Statement is submitted:

- ☒ under 37 CFR 1.97(b), or
(Within three months of filing national application; or date of entry of national application; or before mailing date of first office action on the merits; whichever occurs last)
- ☐ under 37 CFR 1.97(c) together with either a:
☐ Statement under 37 CFR 1.97(e), or
☐ a \$180.00 fee under 37 CFR 1.17(p), or
(After the CFR 1.97 (b) time period, but before final action or notice of allowance, whichever occurs first)
- ☐ under 37 CFR 1.97 (d) together with a:
☐ Statement under 37 CFR 1.97(e)(1) or (2), and
☐ a \$180.00 fee set forth in 37 CFR 1.17(p).
(Filed after final action, a notice of allowance, on or before payment of the issue fee)

Please charge to Deposit Account **08-2025** the sum of \$0.00. At any time during the pendency of this application, please charge any fees required or credit any overpayment to Deposit Account **08-2025** pursuant to 37 CFR 1.25.

☒ Applicant(s) submit herewith Form PTO 1449 - Information Disclosure Statement together with any required copies of patents, publications or other information of which applicant(s) are aware, which applicant(s) believe(s) may be material to the examination of this application and for which there may be a duty to disclose in accordance with 37 CFR 1.56.

☒ A concise explanation of the relevance of foreign language patents, foreign language publications and other foreign language information listed on PTO Form 1449, as presently understood by the individuals(s) designated in 37 CFR 1.56 (c) most knowledgeable about the content is given on the attached sheet, or where a foreign language patent is cited in a search report or other action by a foreign patent office in a counterpart foreign application, an English language version of the search report or action which indicates the degree of relevance found by the foreign office is listed on form PTO 1449 and is enclosed herewith.

It is requested that the information disclosed herein be made of record in this application.

"Express Mail" label no. **EV 431601859 US**

Date of Deposit **4/21/2004**

I hereby certify that this is being deposited with the United States Postal Service "Express Mail Post Office to Addressee" service under 37 CFR 1.10 on the date indicated above and is addressed to: Commissioner for Patents, Alexandria, VA 22313-1450.

JP 2001-105577

PROBLEM TO BE SOLVED: To provide a method for aligning print position of a plurality of print heads in a printer easily with high accuracy.

SOLUTION: At the time of complementary print with a plurality of print heads, a plurality of patterns are printed while shifting the dot formation timing of the other head by a specified amount, at a time, from that of one reference head. These patterns have area factors of dots formed by that printer dependent on the shift. When the plurality of patterns are read out optically as an average density, optical reading conditions (color of a color filter with respect to a light receiving section) are selected appropriately depending on the color formed by the plurality of heads. Consequently, reading accuracy is enhanced and a timing corresponding to the highest average density can be set as print position aligning conditions.

JP 2000-127375

PROBLEM TO BE SOLVED: To ensure optimal alignment of recording liquid and record processing liquid by aligning the recording liquid and the colorless transparent record processing liquid based on the density measured for a plurality of patterns of different density.

SOLUTION: A print alignment pattern is formed by performing printing with a plurality of points while varying the relative print position between a blur pattern and a print of processing liquid. As the shift from optimal print position alignment conditions increases, contact amount and position is varied between the print of pattern and the print of processing liquid, i.e., between a recording liquid and a record processing liquid, thus varying the state of blur between the recording liquids. Consequently, the density itself at a print section is varied depending on the contacting state of the recording liquid and the record processing liquid. Since a decision can be made whether the print position is optimal nor not from the density at the print section using the print alignment pattern, optimal print alignment conditions between the recording liquid and the record processing liquid can be obtained from the density at a specified area.

JP 2000-127369

PROBLEM TO BE SOLVED: To obtain a dot alignment method excellent in operability by detecting the optical characteristics of a printed image and calculating optimal dot alignment adjusting conditions from the detection results thereby setting the adjusting conditions automatically.

SOLUTION: In bidirection print performing mutual adjustment of dot forming position, print is performed at same position on a print medium 8 in both going and returning strokes.

Printing is performed under a plurality of conditions by varying the alignment conditions of mutual dot forming position between first and second prints. The density is read out using an optical sensor 30 mounted on a carriage, or the like. Best alignment conditions of the first and second prints are then determined from the relative relation of the density. More specifically, proximity characteristics of density are calculated for the conditions of hitting position from relative relation of the conditions of hitting position and the density and then optimal conditions of hitting position are determined from the proximity characteristics.
